## 1. New Features in Minitab Connect 7.10.6

### **Purge User (LP Licensing)**

Allows customers to fully purge information from users who no longer have a Minitab Connect subscription. It also allows customers to migrate a previous user's assets (tables/dashboards/etc.) to a new user.

### **Rest API Connector – Client Authentication Settings**

Lets users define how client authentication credentials are passed in the auth/token exchange.

### **Dashboards – Copy and Remap Assets**

In Minitab Connect Dashboards, assets can easily be copied and pasted to accelerate the creation of new visualizations. Additionally, users can remap visualizations and slicer controls to different data views. This offers easier mechanics to create similar dashboard metrics across multiple pages that leverage independent data sets.

## 2. Maintenance Items in Minitab Connect 7.10.6

**Centro Connector Updates to Support Storing Access Tokens:** Centro is implementing a change to only allow 24 access tokens to be generated a day. The connector will be updated to support storing access tokens as currently it gets a token before making an API call.

**Upgrade Google Ads API Version V18 to V20:** Upgrading Google Ads from V18 to V20 due to sunset schedule of 2025-08-01.

**Reddit Connector: Update to V3 API** – The Reddit V2 API that the connector currently utilizes is being sunset August 30, 2025, and needs updated to the V3 API.

## 3. Problems Resolved in Minitab Connect 7.10.6

The following issues are resolved in Connect 7.10.6:

- Forms incorrectly allow Custom SQL and Mashup fields. (271535)

- The "JavaScript" option is deprecated for new forms and is only retained for existing forms that already use it. (277045)
- From/To Table insert triggers alerts on unchanged Multi-Column Index (MCI) data with no new records. (293378)
- Preview error when creating tables with specific user group. (290334)
- Error loading graphs if a slicer is linked to an empty data set on the dashboard. (292530)
