2. Maintenance Items in Minitab Connect 7.10.9	2
3. Problems Resolved in Minitab Connect 7.10.9	3

1. New Features in Minitab Connect 7.10.9

Data Process - Default Navigation

To improve workflow continuity and user experience within Minitab Connect, we updated the behavior of the **Processes** tab:

- When users select the **New (+)** button to create a Data Process, the creation interface opens in a new browser tab. This allows users to maintain their current context while initiating a new process.
 - URL pattern: https://connect.minitab.com/table/{TABLE_GUID}/process/create
- When users select the **Edit** button for an existing Data Process, the selected item also opens in a new tab. This enables seamless editing without disrupting the current view.

This change ensures users can work across multiple processes without losing their place, streamlining navigation and reducing friction in multi-tasking scenarios.

Flow - Disable Notifications

To provide users with greater control over their experience in Minitab Connect, we added a per-flow notification toggle:

- Each flow will include a toggle button that allows users to enable or disable notifications based on their preferences.
- Notifications are enabled by default, ensuring continuity for existing workflows.
- Alert-type flow blocks are unaffected and will continue to deliver notifications regardless of toggle status.
- Adjusting the notification setting will not trigger or execute the flow. This preserves system stability and prevents unintended actions.
- When notifications are enabled, users will receive both standard notifications and issue/error alerts related to the flow.
- When notifications are disabled, users will receive only issue/error alerts. This ensures they still receive critical information.

This enhancement empowers users to tailor their notification experience while maintaining visibility into essential flow health indicators.

2. Maintenance Items in Minitab Connect 7.10.9

Connector - MongoDB - Advanced Settings

We added two updates to the filtering experience to improve how users interact with MongoDB data.

1. Enhanced Field Selection

The fields input supports nested fields from MongoDB collections. These nested fields will be displayed using a dot notation (e.g., user.address.city). This is the standard way MongoDB represents nested data, not a regional or formatting setting.

This change allows users to precisely target specific data points within complex documents.

2. Query Configuration Control

We added a new input called Query Configuration, which gives users the ability to choose between two filtering modes, Basic Filtering (Default) and Advanced Options (JSON).

Basic filtering displays the legacy filtering UI, which is familiar and easy to use. This option is ideal for users who prefer a guided, form-based approach.

Advanced Options reveals a new, open-ended JSON input for advanced users. This enables more flexible and powerful queries directly against MongoDB.

This toggle ensures that both novice and advanced users can work in the way that best suits their needs.

Connector Sunsets

The following connectors will sunset for all customers:

- Bitly
- theTradeDesk
- Bing Ads
- Chartbeat
- Google Display & Video 360
- NiceInContact
- Qualtrics
- Google Search Console
- Vidyad
- Facebook Audiences
- SurveyMonkey
- Google My Business
- Accelo*
- Pinterest*
- Reddit*
- Dun & Bradstreet*
- Cvent*

- Microsoft Dynamics CRM*
- Snapchat*
- Twitter*
- Salesforce*
- Facebook*

**Connector may still be available for some customers with existing connections.*

3. Problems Resolved in Minitab Connect 7.10.9

The following issues are resolved in Minitab Connect 7.10.9

- Following the deployment of version 7.10.8, we identified errors impacting the Flow tool and Dashboard functionality within VM subscriptions in the live environment. A hotfix was applied to resolve these issues. (300566)
- Closing the SQL Edit modal does not pass values back to the input field. (300808)
- Issue with Google BigQuery Connector when dataset contains many tables. (300608)
- Conditional Formatting not displayed as intended on dashboard tables when the condition filter field is hidden. (256159)
- Dashboard Table Asset Data Not Loading when Exporting to PDF. (299565)
