### 1. New Features in Minitab Connect 7.7.3

### 2. Maintenance Items in Minitab Connect 7.7.3

- Twitter Connector
  - Re-enable Twitter connector with the ability to access the Twitter Ads API
  - Users will now have to register their own developer app with Twitter, and enter in their app’s credentials to use the connector
- Pinterest Connector
  - Imports ‘Date’ field for analytics endpoints
  - Imports name information when IDs are present for campaigns, ad groups and ad data sets
  - Fixes error when attempting to pull data from an advertiser account with no data
- OneDrive Connector
  - Fixed bug that wouldn’t allow the OneDrive folder to pull files from to be updated after initial table creation
  - Added the ability to change the number of files to request from OneDrive
  - Added the ability to enter the maximum number of files to import into Connect from OneDrive
- OSIP Connector
  - Connector will now error when using the API Gateway and the connector does not retrieve results when requesting the list of available servers
  - Added the ability to enter in an interval parameter for interpolated values in the OSIsoft PI Asset Framework
- Snowflake Connector
  - Fixed bug that wouldn’t allow the user to select a key field when choosing “Skip to SQL” functionality

- API Key Expiration Alerts
  - This will inform users using API Keys, 7 days before their keys expire, that their keys are expiring soon via Email and In-App Notifications.
- Update Splash Screen Logo
  - When loading the application, the product branding image was changed
- Google Ads Connector update to v 16
  - Upgrading Google Ads Connector from v14 to v16
- S3 Connector
  - Add support for inserting meta data headers from CSV file into a column during import.

### 3. Known Problems and Workarounds

#### Item 1

When using the Safari internet browser in combination with having the “Monitor User” role, your session may be logged out unexpectedly. (229698)

WORKAROUND: Use the Chrome or Edge internet browsers with this role.

#### Item 2

When in Preview Mode if there is one categorical slicer on the dashboard with a very high number of levels, any other categorical slicer will not be able to open the dropdown menu until a selection is made on the first slicer.

WORKAROUND: Set a preset in Edit Mode before entering Preview Mode. In this case, all options will still be present on the right-side options pane before entering Preview Mode.

#### Item 3

Occasionally on larger Dashboards with many Views, some of the Views may not load in correctly when opening the Dashboard or during an Auto-Update. New Assets cannot be created using those Views and any Assets associated with them cannot be edited.

WORKAROUND: Open the View in Connect and re-save it (No changes are needed). After that either close and reopen the Dashboard or enable Auto-Update.

#### Item 4

Large Google Ads imports are causing memory exhaustion errors.

WORKAROUND: Use the custom date selectors to pull smaller timeframes across multiple runs.

## 4. Problems Resolved in Minitab Connect 7.7.3

The following issues are resolved in Minitab Connect 7.7.3

- Address loading performance issue of Notifications after filtering (185280)
- Right Click on some text fields and select "Show Data" rounds the value if it is all numerical (185639)
- Field with certain characters does not allow the field to be added to conditional formatting (186153)
- Null filter breaks conditional formatting AND changes the fields the data are in (186457)
- Hiding the fields from the view breaks all the conditional formatting rules (186902)
- Save External Copy triggers error with multi-dropdown fields (187021)
- Better handling access type dropdown when creating user roles (186956)
- Hidden field with default value is ignored on paste or file insert on forms (186837)
- Conditional Formatting not always applied on web export with certain field types for filters (186876)
- Better handling sessions with API calls in multiple tabs of the browser (186921)
- Mashup table creation fails with certain characters in view and field names (186886)
- Sanitize Data Gateway username on creation (187014)
- License Portal update resets default tools in customer settings unexpectedly (187023)
- 'Timeout Error' with ComputeService (186986)
- Select a Data View action does not always work as expected for tables with large number of data views (186364)
- Form submission does not always record the correct user information (186289)
- Alerts may not appear in Manage Alerts dialog after saving dashboard (187016)
- Duplicate alerts can be saved (187004)
- KPI asset unexpectedly rounding on sums (187042)
- Some existing Analysis could not be updated even with data changes (187095)
- OneDrive connector doesn't fetch more than 200 filenames (186928)
- OneDrive Connector doesn't update folder after initial table creation (186978)
- Snowflake Connector: Cannot use Key Field when using skip to SQL option (187009)
- Connector: OSI PI Connector returning "Error-No data servers available" (187052)
- Pinterest Connector throwing warning causing the connection to fail (187074)
- OneDrive Connector sometimes throwing warning on last setup step (242463)
- Google Ads: adding better validation in account list (247071)
- Google Ads: better handling cancelled accounts in account list (247094)
- Remove 'Limit list / Edit list' options from right click menu for Custom SQL fields in Prep Tool (174275)
- Remove 'Limit list / Edit list' options from right click menu for system fields in Prep Tool (185067)
- Copy a record issue with column name contains double quote(s) (178368)

- Remove extra double quotes in table's default SQL modal (221271)
- Adding better validation to Prep Tool's user entered pagination (221761)
- Save External Web URL in Prep tool does not load for view that has field name as integer (222302)
- Records not mapping correctly in Prep Edit modal if field name is integer (222307)
- Adding better validation on Field Types: Trigger modal in Flow Tool (228594)
- Notes panel Type dropdown causes flickering (231933)
- Renaming fields in Prep sometimes deletes the trailing whitespace as you type (233915)
- Prep spinning issue if accidentally input large pagination number (234675)
- Better handling of certain special characters in field names when using Prep filters (238905)
- Prevent Limit List modal's background element from scrolling (239242)
- 'Find and Replace', 'Prepare', and 'Edit List' functions do NOT work on duplicated fields (244955)
- Downloading from Web with current config always downloading the default, not the modified current config (207073)
- Error when saving table if field length is left empty (220316)
- Form HTML element displays as [object] if using saved Snippet (221685)
- Record Audit: Pagination card is offset (230881)
- Adding better email validation in 'New/Edit Alarm' dialog (236187)
- Data not exported properly if user selects MWX file type before running the Web export (241965)
- Multiple Form: Cannot expand field name with certain characters (242054)
- Address config issue for EU workbook for Call URL (242996)
- Improvements to Performance on Select a Data View dialog (232926)
- Improvements to Loading of Data columns in dialogs and related stability issues (234678)
- Enhancements to dashboard performance to load multiple data views efficiently and without disruptions (240558)
- Changing form should populate dialog with active form (197430)
- Renaming a form should update the form name in V2 Dashboard (edit mode's right pane) (221742)
- Long form name does not always should wrap on right pane (221747)
- Date/Time selector UI element not always aligned in Dashboard Form asset (221787)
- UI improvement to long field name in Form asset to prevent overlapping with input box on dashboards (221793)
- Dashboard Form asset should revert to default state on auto-update if the form has been deleted (229143)
- Form and Table Assets may appear blank on specific Dashboard(s) upon switching subscriptions (244233)
- User should be warned when analyses are deleted (231486)
- User should receive a warning when removing data views linked to alerts (242781)
- User should be able to delete dashboards with no linked data views (242930)
- Boxplot tooltip in Graph Builder dialog is hidden (231247)
- Dates in slicer may change to unique date despite different user inputs (231532)

- Graph Builder dialog behaves unexpectedly when attempting to open empty data views (234022)
- Improved error handling when data views are removed from a deleted table (240684)
- Incorrect error messages appear in assets when data view is empty (243177)
- Asset card flyout button tooltips are hidden (245576)
- Folder list is scrolled midway on initial open in Dashboard Save dialog (245585)
