

Minitab Solution Center

February 2026 Release

1. Minitab Solution Center Interface Update.....	1
2. New Features in Minitab Statistical Software	1
3. Problems Resolved in Minitab Statistical Software	2
4. New Feature in Minitab Dashboards.....	2
5. Problem Resolved in Minitab Dashboards.....	2
6. New Feature in Minitab Workspace	2

1. Minitab Solution Center Interface Update

The application frame has been modified to distinguish global and project specific controls. Global and project navigation is now part of the header bar, and the left application rail is reserved for project-specific actions.

2. New Features in Minitab Statistical Software

AI-Power Guided Assistance

Minitab Statistical Software web app now offers interactive, AI-powered guided assistance for navigating the Minitab interface, selecting appropriate statistical tools and methods, and interpreting results. This powerful, new AI integration helps to quickly identify the most effective analyses and visualizations for your data, allowing you to uncover insights even faster.

Filtering in Dialog Boxes

When you select a dialog box item that accepts a column, the dialog provides a list of available columns in the worksheet. You can enter text in Filter variables box above the list of columns to filter the columns by name.

3. Problems Resolved in Minitab Statistical Software

Password protected files are not unlocked as expected. (316790)

Unintended behavior occurs when you apply the MTITLE option to a tree diagram in CART® models. (281668)

Connect line in scatterplot does not correctly connect points. (315194)

4. New Feature in Minitab Dashboards

The KPI Asset now offers additional formatting and display options, including precise decimal control, text size and alignment options, and color settings. In addition to color customization, conditional formatting capabilities have also been introduced to automatically change color and display descriptive labels when thresholds are violated.

5. Problem Resolved in Minitab Dashboards

The dashboard shows an error indicating that the maximum number of data views has been exceeded, even though the customer has fewer than 100 linked views. (314111)

6. New Feature in Minitab Workspace

Minitab Workspace now lets you customize project, map, and brainstorm templates and share all customized templates, giving you ready-to-use starting points for every project. Reuse proven structures, keep teams aligned, and reduce errors by standardizing work around your organization's processes and terminology.
