

Minitab Solution Center September 2025 Release

1. New Features in Minitab Solution Center

SharePoint Integration

From the Minitab Solution Center home page, you can sign in to Microsoft SharePoint® to open files stored on SharePoint sites.

Edit Data from Preview Dialog

Minitab Solution Center displays a preview dialog for data that you can load in Minitab Statistical Software or Minitab Dashboards. When you open a CSV or an Excel file that contains a single sheet, you can perform basic cleaning options directly in the preview dialog or choose to open the data in the Minitab Data Center for more advanced data cleanup.

2. New Features in Minitab Statistical Software

Response Optimization

After you create a predictive model for a single response using TreeNet®, Random Forests®, or MARS®, you can now choose Response Optimizer from the toolbar positioned at the top of the model results. You can also create an interactive Optimization Plot to determine the optimal settings for predictor variables that will lead to a desired outcome or response value.

Interactive Variability Chart

An interactive Variability Chart is now included in the Graph Builder to visualize sources of variation and identify patterns between factors and a response.

Edit Graph Label Precision

You can now edit the decimal precision of axis and data labels in the options pane for graphs in Graph Builder. In addition to better default identification of decimal precision, you can manually override and set the desired precision.

Type 1 Gage Study – VDA5 Support

Type 1 Gage Study now provides support for uncertainty calculations outlined in the VDA 5 standards.

Stability Study for Mixed Models

The Stability Study dialog now features a Batch input box on the main dialog so users can more easily specify a mixed model.

3. Problem Resolved in Minitab Statistical Software

Screening DOE dialog limited available terms. (300567)

4. New Features in Minitab Data Center

Data Center File (.MDCX)

The Minitab Data Center now offers a new file type which allows you to save not only the configured steps, but also the connection information to the source file.

Additional Column Types for Numeric Columns

You have the option to categorize numeric column into five different types:

- Automatic (Numeric)
- Integer
- Decimal number
- Currency
- Percentage

In addition, you can retain the full precision values after formatting for all types except for automatic.

Drag/Drop in the Reorder Columns Dialog

You can now reorder columns via drag and drop in the Reorder Columns dialog.

String Starting and Ending Filters for Text Columns

You can subset values that either start with or end with a specific character/string.

5. New Features in Minitab Dashboards

Table Asset

You can add a table of the source data as an asset on a dashboard alongside other analytics and visualizations. After you insert a table, you can perform the following:

- Select specific columns to display
- Add a row counter as the initial column

- Wrap text columns
- Sort in ascending or descending order by a specific column
- Manually resize column widths
